	Preface	XIII
	IG V gene analyses: clues to the development, prognosis and treatment of chronic lymphocytic leukemia <i>Nicholas Chiorazzi</i>	
	Introduction	1
	Immunoglobulin genes in B cell development <i>Frédéric Davi</i>	
SECTION I	Immunoglobulin gene analysis: technical aspects	
Chapter 1	From the patient to the sequence: selection of material, primers and PCR protocol, clonality analysis, and sequencing protocols <i>Anton W. Langerak</i>	23
Chapter 2	IMGT® standardized analysis of immunoglobulin rearranged sequences <i>Véronique Giudicelli and Marie-Paule Lefranc</i>	33
Chapter 3	Interpretation of ‘trouble sequences’ <i>Chrysoula Belessi</i>	53
SECTION II	Immunoglobulin genes in chronic lymphocytic leukemia: clinical and biological significance	
Chapter 4	Immunoglobulin genes in chronic lymphocytic leukemia: is the B cell receptor the key to understanding pathogenesis and progression? <i>Freda K. Stevenson and Kathleen N. Potter</i>	67
Chapter 5	IGHV gene mutational status and prognosis in chronic lymphocytic leukemia: its relationship to other prognostic markers <i>Paolo Ghia</i>	81
Chapter 6	Stereotyped B cell receptors in chronic lymphocytic leukemia <i>Kostas Stamatopoulos</i>	95

Chapter 7	How to report IG sequence data in clinical routine: 113 cases difficult to categorize <i>Richard Rosenquist</i>
Chapter 8	Immunoglobulin genes as targets for minimal residual 125 disease detection in chronic lymphocytic leukemia <i>Carol Moreno</i>
	Glossary 135
